"BEST by YOUR Test"

What is an Oil Film?

As applied to an automobile engine, it is that thin coating of lubricating oil that keeps metal from touching metal. It prevents actual contact between moving parts.

Under heat, a poor oil fails to maintain this coating on moving parts, resulting in excessive wear to the most vital parts of an engine,—its pistons, cylinder walls, its bearings. Loss of power soon follows and in time your engine has been reduced to a pile of junk.

Insist upon an oil that assures you of proper lubrication—an oil that at all times keeps metals apart in your engine.

Such an oil is our famous SPEEDWAY brand—known throughout the Southwest as the final word in motor lubrication.

SPEEDWAY gasoline and motor oils are obtainable everywhere in El Paso and in many out-of-town points.
