STATE CHRISTIAN FELLOWSHIP
HEAD HAD UNUSUAL MILITARY
EXPERIENCES

By Lenore Hughes
Written Especially For Sundial
EPT 12/26/71

“I first came to Texas in about 1907 when my father moved his family from St. Joe, Mo., stopped in Orogrande, N.M., then moved to El Paso,” said Col. (ret.) John C. Light, state president of the Christian Men’s Fellowship. “We’ve been residents of the El Paso area since that time.”

One of five children (two boys and three girls) John exhibits all the tenacity and grim determination of his Scotch-German ancestry. His father, Robert C. Light, a carpenter by trade, living in Lebanon, Pa., met and married a young woman who had been left an orphan at the age of ten. Although she was raised by an uncle in Missouri, Mrs. Light was proud of her Scotch father who made his living by manufacturing sails in a New York harbor.

The rolling hills around Orogrande first attracted the itinerant family. They lived a year in this section of the country, becoming acquainted with many others who made their livings in the traditional pioneer occupations. John especially remembers a blacksmith in the little town who cut his hair with clippers.

“I was only about two years old when we visited Mr. MacLaren,” he said with a chuckle. “He sat on a chair and I stood between his knees. He would run those had clippers up to the top of the head and lift them away. Usually they were not cleared of the hair. It felt like he was pulling all my hair out . . .”

DECIDES ON CAREER

Early in life, while still in high school, John decided on the Army as his career. He attended Georgia Tech as a cooperative student. This program helped him acquire an education during four week periods alternated with four weeks of work. He was graduated during the great depression of 1929, commissioned into the Army (into Army Ordnance), then called into the Army reserve as an officer in 1942, and finally integrated to the regular Army in 1947.

JOHN C. LIGHT

He first served with the military mission to the Soviet Union. “With regard to the situation in Russia, we were in Moscow from July 1944 to Christmas day 1945. Most of the Russian men who were in Moscow during this period were cripples or old men. The other men were still off to war. The on-

ly American women on the scene were secretaries and clerks with the embassy.

“We could not take our families in. This was one of our problems. Generally speaking, however, I did not think the Russian people were a great deal different from the American people. They were a happy group and sang a lot. They enjoyed having a good time. But in Moscow, the seat of the government, people were rather hesitant to talk very much for they did not know whom they could trust.”

The only church he knew in Russia was a Catholic mission ran by a rather outspoken little Irishman from New Jersey. The building in which he held his services belonged to the French.

“One of our members, a captain who was primarily an interpreter by the name of Doncavish, married a Russian girl. I stood up with him. As best man I had to stand behind him and hold a crown over his head. I stood there marching hither and yon around the room while the chanting and singing was going on. This occupied all of a 45 minute period and was perhaps the most outstanding event or my stay there.

DELAYED EN ROUTE

“But probably one of the most interesting experiences I had was coming out of Russia. We flew out on a Russian plane headed for Berlin. I had a diplomatic pouch almost as big as I was accompanying me. The Berlin airport was weathered in, so we flew on to Dresden, landed, and went into the control office there at the airport. I called Berlin and asked them to come and get me.

“‘That is Russian territory! It is dangerous down there’ I was told. So I was left to my own devices in Dresden for two days and two nights. A Russian doctor, who was a

specialist in the diseases of the silver fox, was on his way to a conference in London, accompanied by his wife. He was kind enough to take me under his wing. When the weather cleared, everything that had gasoline in it took to the air and flew to Berlin.”

After leaving Russian territory he returned to the United States and was located at a gun factory or arsenal in Watervliet, N.Y., a city of 16,114 population. It is situated on the Hudson river, about six miles north of Albany. In the 1940’s, it was the seat of the U.S. arsenal for the construction, of siege, ordnance and field coast defenses, mainly a cannon factory. The arsenal was established about 1813 for the purpose of supplying small arms munitions.

“The army back in those days had one interesting major as a commanding officer. Congress questioned him about planting Dutch elm trees on the arsenal grounds. He wrote Congress and told them that he was using the same authority he did to do everything else and if they did not like what he was doing to write him a book of instructions and in the meantime to mind their own business.

“And if the horseback rider from Washington did not get there in time with the payroll, the commanding officer would go into the local bank, get enough money to pay off the workers and carry on business as usual.”

This arsenal system, established by army ordnance, was more or less along the lines of research and development, pilot building or manufacture to develop methods and establish once controls.

“I went in there, to begin with, as the facilities officer or post engineer, finally taking over the engineering office. We had a commanding officer who had been Gen. Campbell’s executive officer during most of the

war. He anticipated that if the arsenal received any money during peacetime it would be for the purpose of research and development, Therefore he gave me the job of establishing a research department within the arsenal which they had not had prior to this time. We were there about two years.

August 1948 found him in Washington Industrial College of the armed forces and the National War College—joint colleges attended by officers of all services located at Ft. McNair, Washington, D.C. Modern warfare places a heavy responsibility upon the military schools. Every soldier must learn to be a specialist of one kind or another. Only by constant schooling can the soldier keep abreast of the rapidly changing developments in his special field.

ASSESS PROBLEMS

The Industrial College was primarily developed for the purpose of knowing the problems of mobilizing for wartime and how to utilize industry, getting them into production as soon as possible. This is a nine months course, running from August through June. It operated prior to the war, ceased during the war, and opened up again in 1946. It has run continuously ever since.

We did our work in groups, since the Industrial College and the National War College are on the same grounds, we attended most of the morning lectures at the National War College. Our work was finished in June 1949.

“Next we were assigned to the Munitions Board. When the Korean shooting started, it was the responsibility of the Board to control materials. So we took the Army, Navy, and Air Force requirements, justifies them and defended them before the Civilian Material Control Board.”

He left Washington in 1952 for Theater Headquarters in Japan where all personnel reported for assignment. The Far East zone brought new impressions.

“I went into Tokyo and got a little touch of the Japanese as they hurried and scurried in every direction on bicycles, motor scooters, everywhere all over the road, I wanted to go to Korea and get a glimpse of what was happening over there. I actually went on temporary duty and it gave me the opportunity to look around.

“Most of the people you saw around were old folks, not doing anything—just sitting around. There was no activity anywhere and the contrast in the industry and push between those of Japan and Korea impressed me greatly.

“Just prior to my going over there a communications zone had been established in Korea. The ordnance officer due to take the assignment was delayed en route and since I was in Korea it was easy for them to tell me just to stay there as the communications zone ordnance officer.

“We had been there for some time when a man by the [name] of McCaune came into the organization as a major. He had lived in Seoul, Korea, since the age of six years, was educated in the Korean schools, later attending the University of Nebraska where he studied mining engineering. He returned to the Orient staying in this role. Being familiar with the Oriental culture he knew much about Korean background and history. Since the Japanese had burned most of the Korean books, he began teaching a class of Korean army officers, Korean history at night.”

MOVE TO JAPAN

After a year in Korea, the Lights moved to Japan during the summer of 1953 and re-

mained two years. Leaving there in June 1955 they came to the United States where he was assigned to a final job in the office of the Chief of Ordnance in Washington until his recent retirement age.

He met his wife; Dorothy while stationed in Douglas, Ariz. as an employe of the gas company. She was teaching in the elementary school at the time. After their marriage, she accompanied him on many of his tours.

MORE

“I thoroughly enjoyed army life,” she remained. “I particularly liked meeting people and moving to the different places. I have missed army life. It was very exciting. I was in Japan with Jack and all five children were with us. The oldest daughter graduated from high school there.”

Each child was born in a separate place, Barbara, now a teacher at Magoffin Elementary school was born in El Paso. Jack, a geologist, was born in Mississippi; Helen, a registered nurse at Hotel Dieu, was born in Tennessee; Susan in the advertising department at the Popular, was born in New York; and Rob, working at KELP-TV and a student at the University of Texas at El Paso was born in Walter Reed Army hospital in Washington, D.C.

John Light is not just another retired army colonel, but a man of verve. An elder in first Christian church, he was recently elected to his second term as president of Texas Christian Men’s fellowship. He served as state vice president and district president before is election to the state positions. He resides with his wife and two younger children at 1508 Elm.

Col. Light’s main interests from boyhood have been the army and the church. In contrasting the various roles of men in their several walks of life, Col. Light said, “I think, generally speaking, you will not find there is much difference. Men behave more or less alike regardless of the walk of life or course in the army.”

BECOMES REALITY

Until now men’s direct involvement in the church has been considered a rarity, but then Col. Light and his cabinet made plans for 160 men to participate in worship mission labs during the Texas Men’s retreat in the fall of the year, the church found “Men undergirding Mission” had become a reality. The labs were conducted on the six mission imperatives of the Christian church for the 1971-75 quadrennium. They are: Evangelism and Renewal, Leadership, World Order Justice and Peace, Ecumenical Involvement, Financing, Reconciliation.

The Christian Men’s Fellowship actually has only one general meeting, which is the state retreat. The cabinet, comprised of the district presidents and area vice presidents meet in the spring to do planning for the retreat which about 300 men attend, In addition, the districts, and sometimes the bi-districts, hold their own retreats. In the El Paso area which is District No. 3 the men hold a dinner meeting each quarter. During the past year Col. Light covered the fringes of Texas by attending district meetings in Amarillo, San Antonio, Corpus Christi and Texarkana.

“I get the impression that the men, generally are feeling the necessity of a revival or a renewal on the basis that the mission or the objectives of the Christian Men’s fellowship is to undergird the total program of the church.”

When a man makes plans for a group of other men and uses his energies to travel across the state and nation many times during the year to exhibit his interests in men, it has to be someone with that extra element acquired by only a few known as enthusiasm. Col.-Light exhibits that quality.

Outstanding trips during the 1970-71 period included attendance at the World Convention of Christian Churches in Australia, where he attended a Mass men’s meeting, a trip to Indianapolis in June and on to Louisville in October. Both the latter trips included meeting with the Advisory Council of Men’s Work.
